1 Overview

1.1 Gang-Writer8-8

The Gang-Writer8-8 main components are the G-ICPM08040 and G-ICPB00040. The G-ICPM08040 which is also known as the programming module, includes 4 programming units, namely ICP1~ICP4. This is used together with the G-ICPB00040 which is the Base Board. Together they can implement a powerful means of programming 8 Holtek 8-bit Flash MCUs in parallel to meet the high efficiency requirements for volume production.

1.2 Main Features

- Supports Holtek 8-bit Flash MCU programming
- Uses the HOPE3000 software
- · Programming files are downloaded to the programing module
- · Supports programming module firmware online one-click quick update
- Compact size (136×75×23mm) for usage convenience with fixture
- Supports up to 8 sites parallel programming
- 2/4/6/8 sites parallel programming available
- Supports module extension to achieve up to 12/16 site parallel programming
- Visual programming status display LED indicators
- Supports offline programming mode

1.3 Hardware Introduction

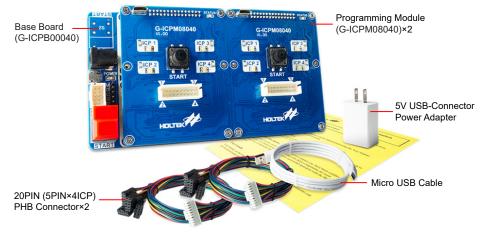

Figure 1. Gang-Writer8-8 Monolithic Components

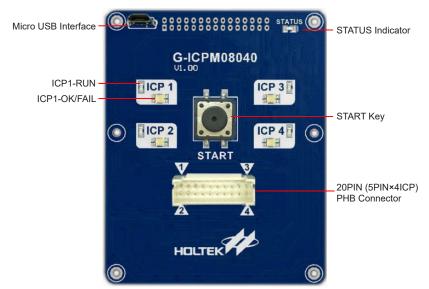

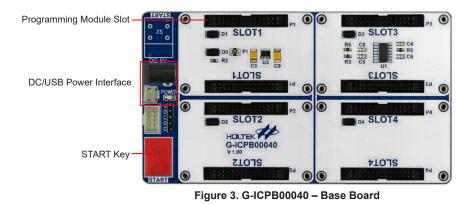

Figure 2. G-ICPM08040 – Programming Module

1.4 Software Introduction

The software HOPE3000 (V3.26 and above) is used, refer to appendix <u>HoltekEWriterUsersGuide(125).pdf</u> for detailed HOPE3000 usage description. After the G-ICPM08040 hardware is connected, the hardware name and firmware version will be displayed at the lower right corner of the software interface, as shown in Figure 4:

Program	Ontion	Data	-						Process	Driver
	option	Date							Blank Check	HT66FV160 ~ 9.0
0000:1E							0000	^	Program	CheckSum
0010:00							0000		Verify	CheckSum Verify Code
0020:00							0000		Lock	0078H 3DC7H
0030:00	00 0000	0000	0000		0000	0000	0000		Erase	Program Option Program+Optio
0040:00							0000		Read	Program+Option+Data Bootloader
0050:00	00 0000	0000	0000	0000	0000	0000	0000		Auto Upload After Read	PreV1.04 Algorithm(No Sugges
0060:00	00 0000	0000	0000	0000	0000	0000	0000		Auto Erase Before Program	Counter
0068:00	00 0000		0000	0000	0000	0000	0000		Check ID	Success 13 Fail 4
0078:00		0000		0000	0000	0000	0000		Smart Programming	Total 17 Reset
0088:00				0000	0000	0000	0000			
0098:00 00A0:00		0000		0000	0000		0000		Connecting to Writer	
00A8:00		0000		0000			0000		Connected to writer Downloading Driver and File

2 Programming Module Independent Operation

2.1 Online Programming Mode

In this mode, only the ICP1 unit works. Connect the programming module to a PC using a USB cable and open the software. The ICP1-RUN LED will be illuminated indicating that it is in the online programming mode, as shown in Figure 5. For online programming specific operations together with the HOPE3000, refer to appendix <u>HoltekEWriterUsersGuide(125).pdf</u>. Note that online programming does not support smart programming.

Figure 5. Programming Module

2.2 Offline Programming Mode

Offline Programming Data Download

Connect the programming module to a PC via a USB cable. After the module has successfully connected, open the desired file and download it, as shown in Figure 6. Refer to appendix <u>HoltekEWriterUsersGuide(125).pdf</u> for the specific software operation procedures. When the offline data download has successfully completed, the STATUS LED will remain on.

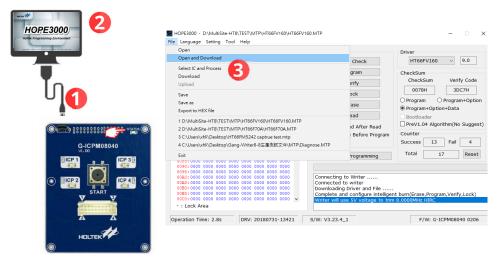

Figure 6. Offline Programming Data Download - Single Module

Offline Programming

After a 5V/3A power is connected, the STATUS LED will remain on. Press the START key to implement programming. The programming states can be observed by the corresponding LEDs.

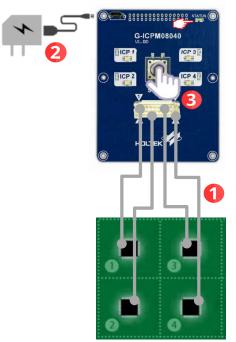

Figure 7. Offline Programming – Single Module

Programming Mode Selection

Either 2 or 4 site parallel programming can be selected using the OPTION S/W settings according to the actual requirements, as shown in Figure 8 and Table 1. With regard to 6 or 8 site parallel programming description, refer to <u>3.2 Programming Mode Selection</u>.

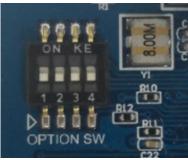

Figure 8. OPTION S/W

Switch1	Switch2	Site Settings
OFF	OFF	Enable the ICP1~ICP4 programming – factory default
ON	OFF	Enable the ICP1 and ICP2 programming
OFF	ON	Enable the ICP3 and ICP4 programming
ON	ON	Enable the ICP1 and ICP3 programming

Table 1. OPTION S/W Site Settings

3 Using the Programming Module together with the Base Board

In the offline programming mode, using the programming module together with the base board can implement 2/4/6/8 sites parallel programming in the standard mode or 12/16 site parallel programming in the extension mode. To implement programming module offline data download, connect the programming module to the PC via a USB cable directly. It is not necessary to remove it from the base board.

3.1 Offline Programming Mode

Offline Programming Data Download

The hardware connection is shown in Figure 9 and the specific operation steps are the same as 2.2 Offline Programming Mode – Offline Programming Data Download.

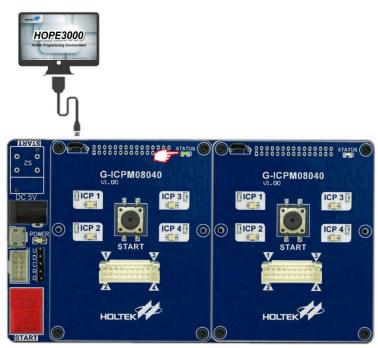

Figure 9. Offline Programming Data Download - Module & Base Board

Offline Programming

After the offline programming data has been downloaded successfully, remove the USB cable from the PC. Connect a 5V/3A power to the programming module after which then the STATUS indicator of each programming module will be on. Press the START key to start programming after which the programming results can be obtained by observing the LED indicator on the corresponding programming module.

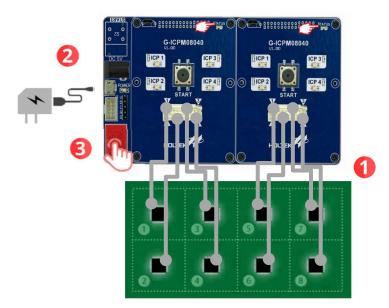

Figure 10. Offline Programming – Module & Base Board

3.2 Programming Mode Selection

Standard Mode

2, 4, 6 or 8 site parallel programming can be selected by the OPTION S/W settings, as shown in Figure 11.

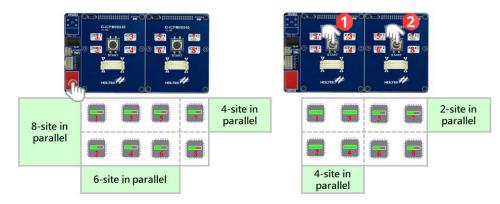

Figure 11. Programming Mode Selection – Standard Mode

Extension Mode

In the offline programming mode, if the base board works together with 4 programming modules, up to 16 Holtek 8-bit Flash MCUs can be programmed in parallel as shown in Figure 12.

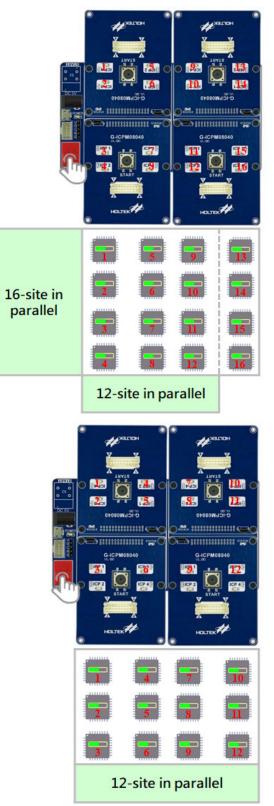

Figure 12. Programming Mode Selection – Extension Mode

4 Considerations

- Regarding the power supply (5V/3A) and the programming lines, it is strongly recommended to use the original accessories included in the product.
- Each separate programming channel (ICPx) provides a current of only 150mA.
- When programming, the capacitor connected to the base board VDD should not exceed a value of $220\mu F.$
- The online programming mode does not support smart programming, namely auto programming. As shown in Figure 13, the auto programming button is disabled with a grey colour.
